List all prime numbers between 200 and 300 which the double sum of digits is 5.

Answer: The primes between 200 and 300 are:

- 211, 223, 227, 229, 233, 239, 241, 251, 257, 263, 269, 271, 281, 283 and 293.
- The sum of the digit to lead one number, and so the double sum if necessary of the previous primes are:
 - $2+1+1=4$, $2+2+3=7$, $2+2+9=13$, $1+3=4$, $2+3+3=8$, **$2+3+9=14$** , **$1+4=5$** , $2+4+1=7$, $2+5+1=8$, **$2+5+7=14$** , **$1+4=5$** ,
 $2+6+3=11$, $2+6+9=17$, 8 , $2+7+1=10$, 1 , $2+8+1=11$, 2 , $2+8+3=13$, 4 ,
 $2+9+3=14$, 5

The solution are: 239, 257 and 293.

Please understand that each number lead to another summing its digits. 5 means Change ... or great change. While 3 is acceleration.

FTHumanEvolutionCourse is looking to release a collection of books for the BASIC of Preparation for Young people in the collection of "Forgotten Science and New Age".

Therefore, we will choose a number between these three.

Please note that $2010=2+1=3$ (Acceleration) and $2012=2+1+2=5$ (Change) ... are the actual and coming year. $2011=>4$ leads to Gaia (Mother).

Thanks,

List all prime numbers between 200 and 300 which the double sum of digits is 5 (Solved).
